What is Protocol?

- 1) Protocol is the format in which the string of data sent to the PC or host device from the scale.
- 2) Each scale manufacturer has their own distinct format in which data is sent.
- 3) The application software within each state includes other scale manufacturers and older NCI products.
- 4) The standard default setting is NCI protocol, you can change the protocol of each scale, by simply entering into the diagnostics configuration via the keyboard.
- 5) Use this feature when replacing Older NCI products or competitors scales in the field, or to connect to a shipping or mailing software that is used by the customer.
